## Security For Mac Os 2018

Apple's macOS and its predecessor Mac OS X have long been able to work as servers.. Description The Microsoft Office 2016 application installed on the remote macOS or Mac OS X host is missing a security update.. Synopsis An application installed on the remote macOS or Mac OS X host is affected by remote code execution vulnerability.. The Future of macOS Server Posted on March 6th, 2018 by Kirk McElhearn If you use an iMac or a MacBook Pro, you may not realize that, with some additional software, you could turn that computer into a server, a computer that can share files, host websites, run a virtual private network, and much more.
